PAWEL POKORSKI

SOFTWARE ENGINEER | PYTHON | FULL-STACK | DATA & AUTOMATION

+48 797 597 564 pawit.uslugiprogramistyczne@gmail.com

TECHNICAL SKILLS

Languages

- Python, SQL, JavaScript

Frontend

- React, Next.js, HTML, CSS, Tailwind

Backend

- FastAPI, Flask, REST APIs

Data

- Pandas, NumPy, ETL, data processing

DevOps

- Docker, Git, GitLab, Linux, CI/CD

Databases

- Mariadb, MySQL, PostgreSQL, Redis

Other

- Data visualization, process automation, software architecture

EDUCATION

10.2021 - 02.2024

BYDGOSZCZ UNIVERSITY OF TECHNOLOGY

Electronics and telecommunications - Masters

02.2019 - 08.2019

HELLENIC MEDITERRANEAN UNIVERSITY HERAKLION

Erasmus+

I consent to the processing of my personal data for recruitment purposes in accordance with applicable data protection regulations.

ABOUT ME

An experienced specialist with almost 6 years of experience in transforming raw data into intelligent engineering tools. I combine the skills of a Data Scientist (Pandas, statistical analysis) with those of a Full-stack Developer (FastAPI, React). I create parsers, applications, and dashboards that optimize work and automate processes.

CAREER SUMMARY

01.2021 - NOW

NOKIA

Software Engineer / Full-stack Developer

- Automated the fiber-optic network design process by developing a web application covering rack and shelf configuration, documentation generation, and step-by-step engineer workflow. Reduced design effort from ~36 hours to ~8 hours (~78%).
- Built a workforce planning platform that forecasts engineering capacity requirements from current and upcoming projects using historical workload data, with interactive dashboards for analyzing demand and trends.
- Developed engineering automation tools for technical calculations and validation, including shelf capacity and power-consumption checks to prevent over-capacity installations.
- Developed an ML-based project classification tool that uses historical data and project titles to recommend project types for new work orders.
- Delivered end-to-end internal software solutions, from data processing and business logic through REST APIs and interactive web interfaces to deployment and maintenance.
